

Minimize New Pavement BMP

Minimize Impervious Area BMPs

Overview

On many public roads and private property, areas of pavement were paved as a convenience for the asphalt installer, but are not really needed or used by cars or pedestrians. Not paving these areas greatly decreases runoff.

The area with the white lines within the half circle is unneeded/unused pavement.

Maintenance

The maintenance for this BMP is equivalent to the existing needs for up keeping pavement.

Cost

The cost for labor is slightly higher because it is easier to pave the entire area, but there is money saved on material because a lesser area is paved.
