To conform with Section R318.2 of the 2017 Oregon Residential Specialty Code (ORSC), I am notifying the building official that I am aware of the moisture content requirement and have taken steps to meet this code requirement.

Section R318.2
MOISTURE CONTROL

R318.1 Vapor retarders. In all framed walls, floors and roof/ceilings comprising elements of the building thermal envelope, a Class II vapor retarder shall be installed on the warm-in-winter side of the insulation.

Exceptions:
1. In construction where moisture or freezing will not damage the materials.
2. Where the framed cavity or space is ventilated to allow moisture to escape

This project utilized the following vapor barrier retarder method on the walls
PLEASE CHECK APPROPRIATE BOX BELOW:

☐ Paper faced insulation was utilized on the wall
☐ Unfaced insulation with visqueen (polyethylene plastic) applied
☐ A vapor block paint/ primer will be applied to the walls

Section R318.2 Moisture content. Prior to the installation of interior finishes, the building official shall be notified in writing by the general contractor that all moisture sensitive wood framing members used in construction have a moisture content of not more than 19 percent of the weight of dry wood framing members.
